Description

This type of system uses pressure compensated drippers which ensure uniform drip rates even when the pressure varies.

Ultra-slim 5mm tubing links them together, with pipe clips provided for fastening to walls. Barbed tees allow side branches if required. 5mm leads and plastic anchor stakes take the water to the compost in the basket or planter, where it emerges as drips at the rate of 2l/h.

Requires DB valve to comply with domestic water regulations.

Maximum Number of Drippers

Pipe Length	Water fed in at:		Spacing Type
	One end	The centre	
25m	57	76	▲
50m	39	70	▲
75m	31	62	▲
100m	27	58	▲
200m	18	44	▲
50m	27	58	●
100m	18	48	●

▲ = drippers equally spaced down length of pipe

● = drippers predominantly at the far end of the pipe

Planter & Basket Watering
