Description

Spray systems are visually interesting when operating and easy to fit on established borders,

Designed for bed widths from 1.0m to 5.0m, these sprinklers have a high uniformity of distribution and are very water efficient. They use a unique taper fit system to allow easy fitting and fast replacement of sprinklers. All of the sprinklers are also colour coded by output for easy identification.

Sprinklers are normally fitted to 0.35m plastic risers, but 1.0m galvanised risers can also be specified.
