Extensive greenroof

Drip irrigation is the most efficient method of watering an established sedum mat type roof.

Permadrrip Pro has no protruding parts that can be damaged whilst installing and is simply laid upon the felt roof layer, or in the substrate, before the mat is installed making it completely invisible.

Permadrrip Pro uses a unique pressure compensating, non drain, anti syphon dripper, spaced at close intervals along a 16mm diameter delivery pipe. The dripper has a unique labyrinth design that is both self-flushing and highly clog resistant.

- 16mm OD with integrated drippers
- Dripper spacing: 15cm or 30cm
- Pipe wall thickness: 1.2mm
- Emitter output: 1.6l/h
- Closing pressure 0.25 bar
- Max operating pressure 0.5 - 4.0 bar
- Recommended filtration: 0.13mm/130microns
- Liquid fertilizer capability
