

## ACCESS HANGING BASKET FEEDER

### Description

The Access hanging basket feeder provides a simple and convenient way of adding plant feed to an installed irrigation system or can be attached to a hose for manual operation.

### AFBP – Hanging basket feeder

The feeder consists of a wall mounted canister, connection fittings, a replaceable cartridge and a spanner. Mount the canister in a suitable location before the first dripper outlet using the fitted wall bracket (use suitable fixings to suit the material and the filled weight of the canister, allowing room below for changing the cartridge).

The unit head is marked IN/OUT ensure it is connected the right way round. If connecting to an irrigation system use the  $\frac{3}{4}$ " threaded nipples and Barbed caps (no sealing required simply tighten). Connect the 6mm pipe from the supply into the IN barbed cap and the 6mm pipe that runs to the system to the OUT barbed cap.

If using the unit manually use the  $\frac{3}{4}$ " threaded nipples and brass connectors, ensuring when connecting the hoses they are the right way round.

Turn the supply on and check for leaks on the fittings etc.

### AFBP-C – Replacement cartridge

The cartridge is a sealed unit and contains slow release fertilizer granules with an NPK12-12-12. It is recommended that the cartridge is changed halfway through the season.

Changing the cartridge is simple:

- Turn off the water supply.
- Unscrew the blue body cartridge anticlockwise using the spanner supplied with the kit.
- Remove the cartridge, drain the water and discard (currently non-recyclable).
- Wipeout the blue body and remove any leftover seals, wipe the 2 'O' ring seals and smear with Vaseline.
- Fit the new cartridge into the body, ensuring the two black seals top and bottom are in place and it is located correctly in the base, **ensure the 12 holes are at the bottom.**
- Screw the blue body onto the head and tighten using the spanner.
- Turn on the water supply and check for leaks.

**Irrigation systems should only be installed  
by a competent person**
