Description

Drip lines supplied by Access are tough, reliable and suitable for both commercial and residential situations. The drippers themselves are built into the pipe, ensuring a smooth outer wall. Pressure compensation ensures that all of the drippers produce the same amount of water regardless of length of pipe or change of elevation. Normal weeding and bed maintenance will not damage the drip lines. To deter vandalism and provide camouflage, the pipe can be buried beneath bark mulch. Even when installed on the surface, plant growth soon hides the pipe work from sight.

Technical Specifications

- 16mm OD with integrated drippers
- Dripper spacing: 15/30/50cm
- Pipe wall thickness: 1.2mm
- Emitter output: 1.6l/h (pressure compensated)
- Coil size: 25m, 100m
- Fittings : barbed or pozilock
- Operating pressure: 0.8 - 3.5 bar
- Recommended filtration: 0.13mm/130microns
- Liquid fertilizer capability
