Battery operated controllers are becoming increasingly sophisticated and reliable, and allow automatic control anywhere - making them ideal for remote locations.

These commercial quality controllers now feature a completely waterproof case for improved reliability.

To avoid over-watering and wastage of precious water, the controllers allow the connection of a Mini-Click rain sensor. This discrete unit prevents watering after a pre-set level of rainfall and resets itself automatically when conditions dry out.

Single Station
 Supplied pre-wired to a 1" in-line valve.

Multi Station
 Supplied with separate valves. Controller is pre-wired with flying leads and can operate up to 4 station valves plus a master valve.

- Push button operation with large display
- Wall or valve fixing (bracket included)
- Independently programmable for each station
- 1min - 12hr watering time
- 1 year battery life (average)
- Seasonal adjust
- Fully waterproof
- Rain sensor option
- Order code: EPAG01 or EPAG04
