Sprinkler systems are designed to suppress dust, improving the quality of air breathed by both horse and rider.

In addition, whether inside or out, an unstable riding surface can create problems for the horse, rider and the surrounding areas. A sprinkler system can ensure there is minimal movement of the flooring material and the riding surface remains firm.

A number of options are available:

- Mobile sprinkler systems
- Perimeter sprinkler systems
- Overhead sprinkler systems
- Fully automatic, simple manual or remote control options
- Rainwater harvesting options
