Any green roof planting, irrespective of type, will require initial establishment to ensure it's long term viability. This is best done overhead. Using an Access temporary watering system not only provides better establishment, but because of the low precipitation rate there is less run off and large areas can be covered in one go.

- Green Roof kit contains: (50m x 10m strip 500m2)
 - 6 metal sled risers.
 - Naan 501 sprinkler heads.
 - 50m 3/4" commercial hose.
 - Geka quick coupling fittings.
 - Hunter two zone battery controller.
